

With Network & WiFi Distribution

CCTV/ MONITORING

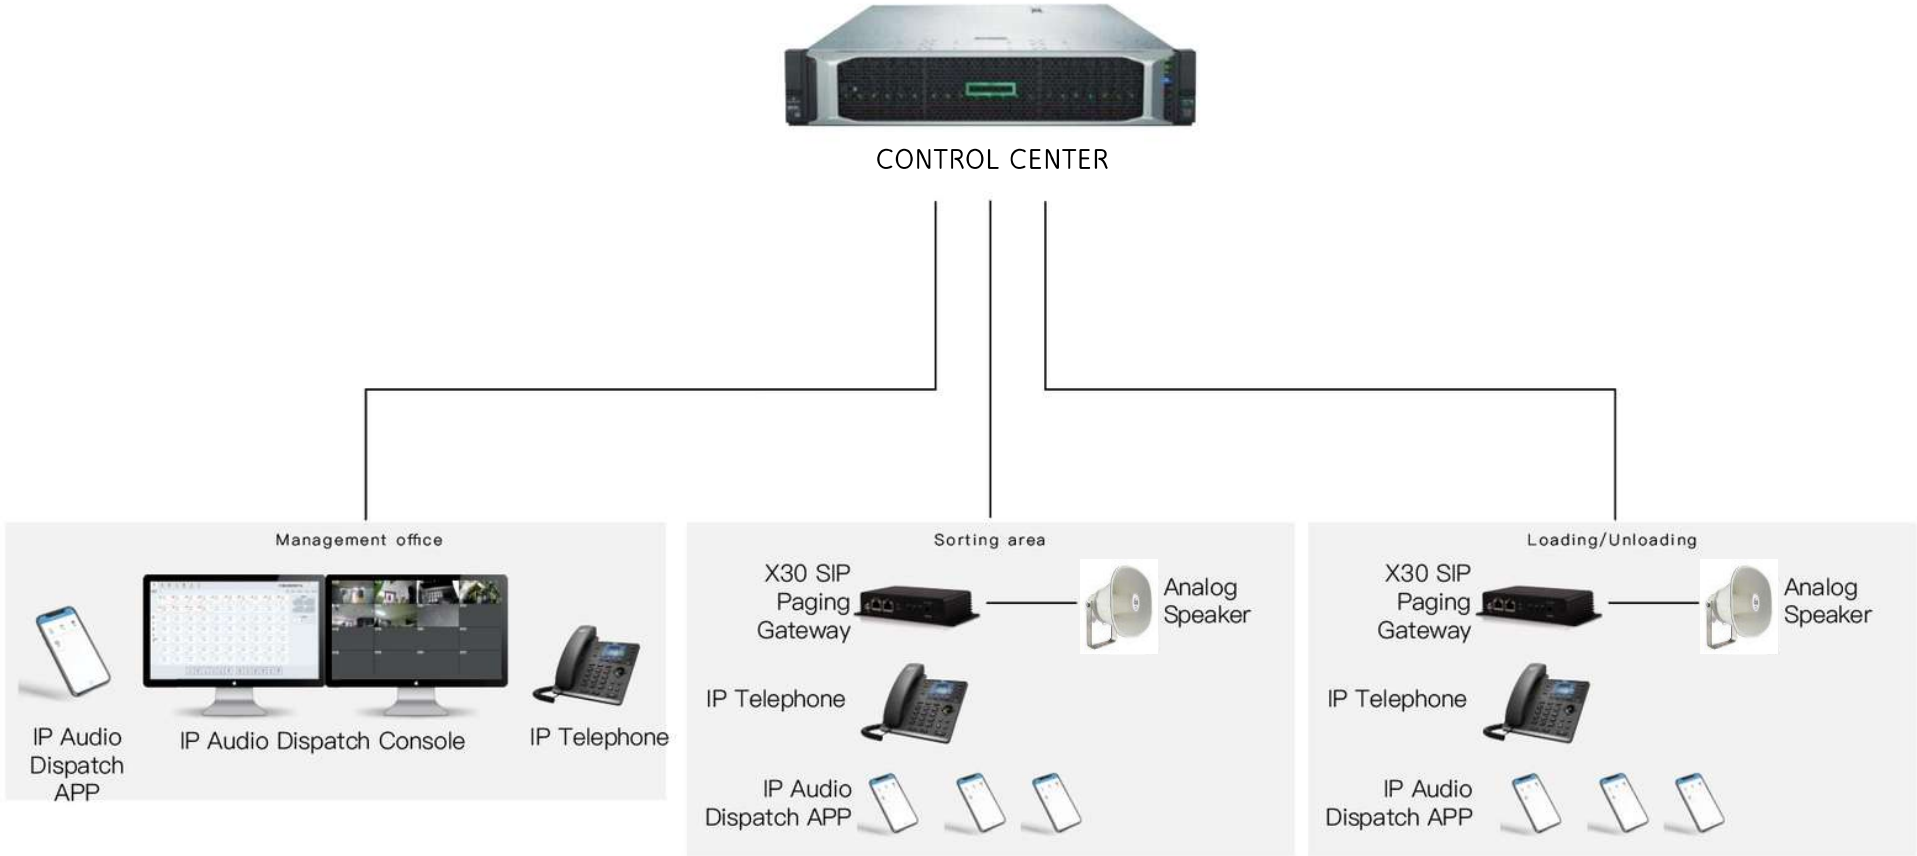

IPPBX/ CALLING

INTERCOM/ PAGING &
BGM

APPLICATION

Speakers in general allows you to **play live and prerecorded announcements.**

In indoor application, you can also **play quiet background music/white noise.**

With Ip Solution you can distribute this solution in wide area.

And the support of the **call button in outdoor IP Intercom** provides two-way **communication.**

When a CALL BUTTON is Press - the button can automatically **call a pre-set help station phone number**, and it can trigger any **CCTV** or alarm nearby for LIVE monitoring in the area .

CBR2 TRACKMEPHILS can help you improve several types of services, care, monitoring and increase operational efficiency and reliably, safeguarding students in **Schools**, patients in **Hospitals**, visitors and staff in **Offices, Malls** or **manufacturing plant**, monitor emergency Traffic situation in the **Barangay** or **City** Streets.

All-in-one telephony and paging system solution.

Besides the telephony features, paging system features are also supported. You can still use any OLD Analog phones that are existing and working to adopt to this new system with Interface.

Even your existing analog speakers/ amplifiers can be adopted to the Ip Control Center and control **background music, broadcasting, emergency notification, scheduled announcement, etc.**

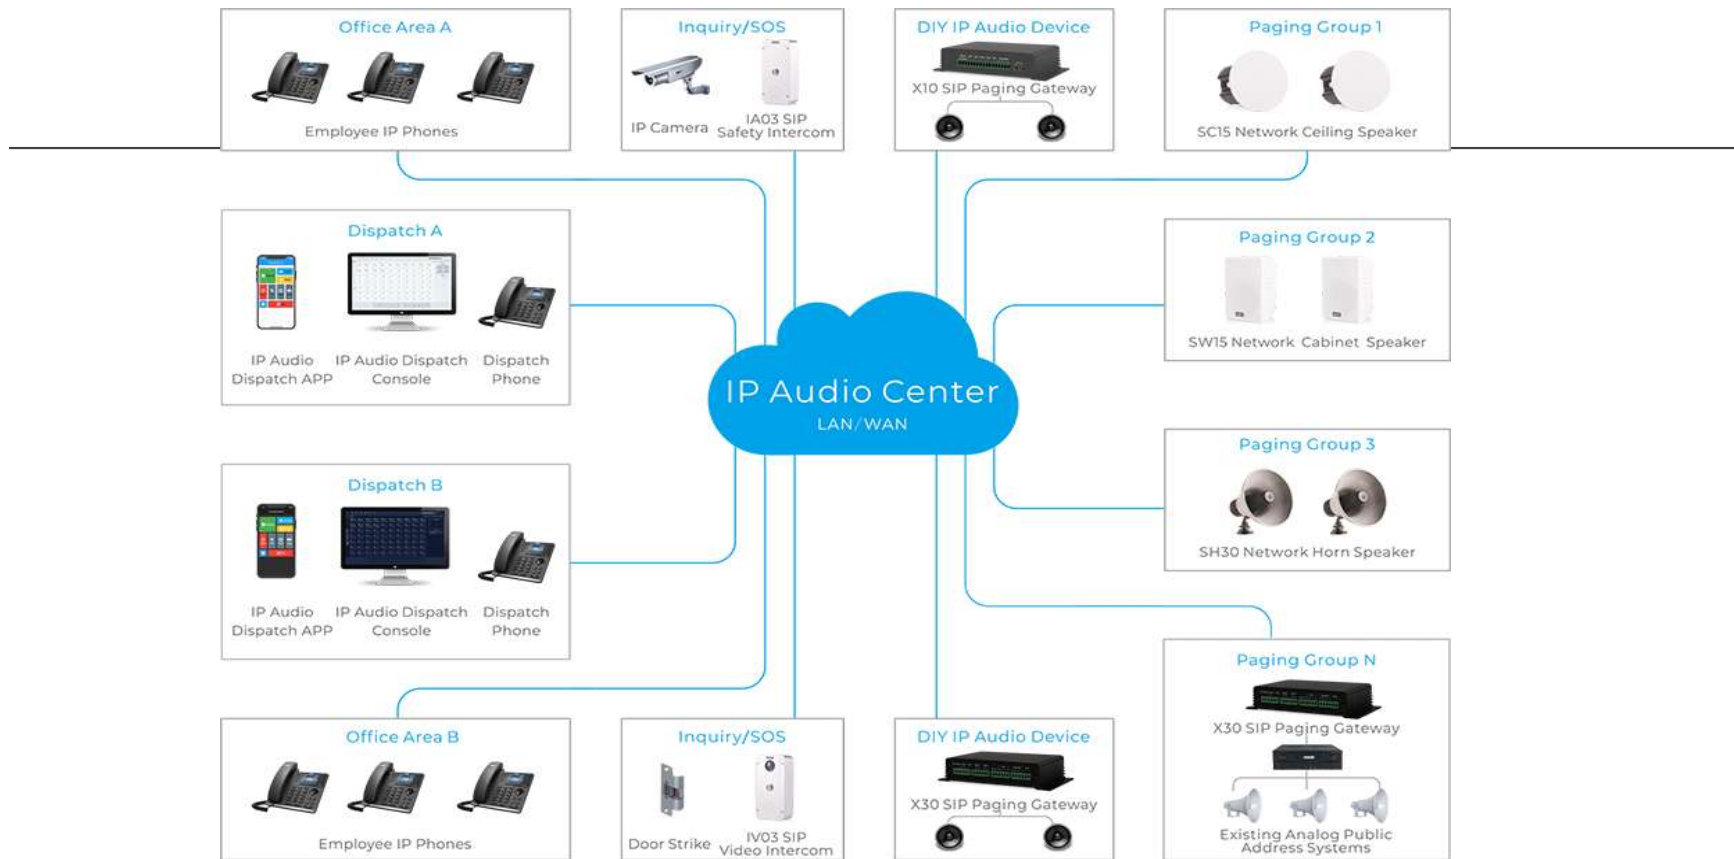

Our system can integrate with hundreds of system available in the market. Making all these features available like Hotel check-in, check-out, wakeup calls, billing, outbound call control, Do Not Disturb, and more.

IPphones with Wifi

Basically Ip Phones can expand network or Internet by connecting to the ethernet port behind the unit. New models are already with built in Wi-Fi for easy connection. It is used to provide wireless internet connection to systems in a small office or department or at a home connecting to it like in a router.
